

Ron Clarke Austin 126

Rear Loaded Horn for the Fostex FE126e

Notes:

This is a collection of what i have gathered together of Ron's plans in it's various guises & versions. Not all are the latest.

1/ The most recent version is Rev H. I only has a raster image available (Ron's original a victim of Windows) so it can be hard to read. Most of the dimension and detail are the same as the earlier version after that, differing primarily in the compression chamber, and the addition of a supraBaffle.

2-5/ vector drawings -- the version posted on the Full Range Forum.

6/ non-standard supraBaffle & detail of Rev H supraBaffle (raster)

7-8/ alternate mouth treatments

9/ C Bobiak working drawing of planet-10 build (compression chamber has been reduced since)
